PRIVY COUNCIL

NATIONAL INSTITUTE FOR MEDICAL RESEARCH,  
THE RIDGEWAY, MILL HILL,  
LONDON, N.W.7.

10th July, 1961.

Professor J. Lederberg,  
Department of Genetics,  
Stanford Medical Center,  
Palo Alto, California,  
U. S. A.

Dear Josh,

Herewith a reprint of a paper from "The Biology  
Of Space Travel".

My stock of bacteriophage lambda 2 has run out,  
and I have carelessly lost it. Do you know if this is the  
same as lambda GV of the Pasteur workers? I would like to  
get hold of some more lambda 2 to use as a marker, and unless  
you know of someone here who has it I would be very grateful  
if you would send me some lysate. I think you propagated on  
W 3110, if I remember. Bill Hayes does not have it.

Best wishes to you and Bruce Stocker, if he is  
still with you, *and to all at Stanford.*

Yours,

P.H.A. Sneath.
